                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -:- SUBCELLULAR LOCATION: Integral membrane protein.
-:- ALTERNATURE PRODUCTS: 3 ISORORMS; GLYTT-1A, GLYT-1B AND GLYT-
1C (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.
-:- TISSUE SPECIFICITY: ALL GLYT-1 SUBTYPES CAN BE FOUND IN BRAIN,
KIDNEY, PANOREAS, LUNG, PLACENTA, LIVER. BUT GLYT-1C SUBTYPE IS
ONLY FOUND IN THE BRAIN.
-:- SIMILARITY: BELONGS TO THE SODIUM:NEUROTRANSMITTER SYMPORTER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        -i- FUNCTION: Terminates the action of glycine by its high affinity sodium-dependent reuptake into presynaptic terminals. May play a role in regulation of glycine levels in NMDA receptor-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PROSITE; PS00610; NA_NEUROTRAN_SYMP_1; 1.

SUBBURIT: THE MAIN SUBBURITS OF COMPLEX B-C1 ARE: CYTOCHROME B, CYTOCHROME C1 AND THE RIESKE PROTEIN.

SIMILARITY: BELONGS TO THE CYTOCHROME B FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   251
